ADVANTAGE PACKS:
MORE POWER TO YOU**

Autodesk® Subscription customers already enjoy access to exclusive tools, training, and web support through Subscription Center. But now there's even more.

Autodesk® Subscription Advantage Packs are now available for 2010 Autodesk software. They provide Subscription customers with early access to the latest product enhancements—boosting productivity and offering a significant competitive edge.

With new features and specialized functionality, tools, and content that are fully compatible with the latest software release, Subscription Advantage Packs help you benefit from the latest capabilities. And, they can be downloaded from Subscription Center—or right from inside most 2010 software.

Subscription Advantage Pack for AutoCAD® Architecture 2010

The Subscription Advantage Pack for AutoCAD Architecture 2010 extends the capabilities of AutoCAD Architecture 2010 software. New tools help speed the design and production of renovation projects, while improved functionality streamlines existing workflows. This pack also includes Autodesk® ImageModeler™ 2009 software.

FEATURES AND BENEFITS

- 1. Renovation Extension 2010**—Improve the speed of the design and production of renovation projects with the Renovation Extension 2010. New renovation-specific tools help you create renovation plans with correct representation of existing, new, and demolition plans. Capabilities include:
 - Renovation object categories—Assign objects to renovation categories that can be changed at any time.
 - Renovation, demolition, and revision plans—Create and modify plans based on current AutoCAD Architecture 2010 design assets.
 - Renovation drawing views—Quickly switch between renovation, demolition, and revision plans with one master drawing, helping to avoid redundant data.
 - Renovation layer options—Specify if and how layer names change, depending on the renovation classification of their objects.

- Select existing objects—Select existing, demolition, or new objects with a single command in order to more rapidly generate plans that reflect only the necessary data.
- Freeze walls—Temporarily interrupt project renovation to correct wall joins without being classified as renovation measures.

- 2. Productivity Extension 2010**—Create custom columns and column grids, and place doors and windows with greater speed and precision using new functionality offered in the Productivity Extension 2010.

- Column creation—Create user-defined columns with linework profiles using arcs, lines, circles, rectangles, ellipses, splines, and polylines.
- Custom column grid creation and editing—Define and edit multiple properties of a custom column grid.
- Door and window placement—Precisely insert multiple doors and windows in relation to grids and walls.

- 3. Autodesk ImageModeler 2009**—Use 2D digital photographs to more quickly create, edit, and texture 3D models for building renovation projects and energy-efficiency analysis. Bridging the 2D and 3D worlds via DWG™, ImageModeler 2009 enables you to:

- Capture building design elements
- Take measurements
- Create 3D models based on the form of existing buildings

By leveraging models developed directly from the physical environment, ImageModeler 2009 helps architects better integrate improvements or renovations in their CAD projects.
